

## Processing Exceptions on EvoWeb – Casement Windows

The following are some non-standard processing pointers for casement windows that can be processed through the software. (To process an order from the beginning, see separate instruction sheet "To input an order or quote on EvoWeb").

- **Double handles:**

You can process a casement window with a double handle provided the height component of the casement sash is a minimum dimension of 750mm.

Once you have entered the dimensions of the frame, process the rest of the specification as normal, including the handle selection. Then locate the  specification question 2xTH Handle and from  the drop down selection menu, select 'Required'

This will then refresh the drawing of the frame to show the two handles:
